Solar Monitoring Solutions by **Cachelan**

View live sites and learn more at www.cachelan.com

Maximize revenue, reduce costs

Be notified of site issues in real time, minimize site visits by accurately diagnosing with our "Analyzer" tool, manage your portfolio of sites, track payments and performance.

Unparalleled support & customer service

Our customers come back to us because of our customer service – from design, commissioning to operations – "**We pick up the phone.**" When an issue on your site occurs, we help in sharing our expertise regarding how to best use our product and resolve your issues quickly.

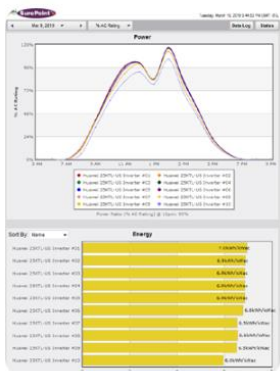

Customized to your needs

Regardless of your site size, equipment used or desired, LDC SCADA requirements, or the number and variety of sites in your portfolio – we will help to integrate the right monitoring solution that lowers your cost, and maximizes your performance.

About Cachelan

Cachelan is a third-party solar monitoring company founded in 2004 in Toronto, Canada which provides customized solar monitoring to your specifications.

Our monitoring platform SolarVu - offers a solution for alerting, diagnosis of issues and reporting for your solar sites. We do this by connecting your site's inverters to the cloud. With SolarVu you will be alerted of issues, manage a portfolio of sites in one place, track payments and view performance so that you can maximize returns on your solar assets.

We have over a decade of experience operating across thousands of sites across North America – portfolios of small sites, commercial & industrial rooftop sites, multi-MW utility sites.
